Questions to Answer

Q.1:- Which claim types are the most expensive?

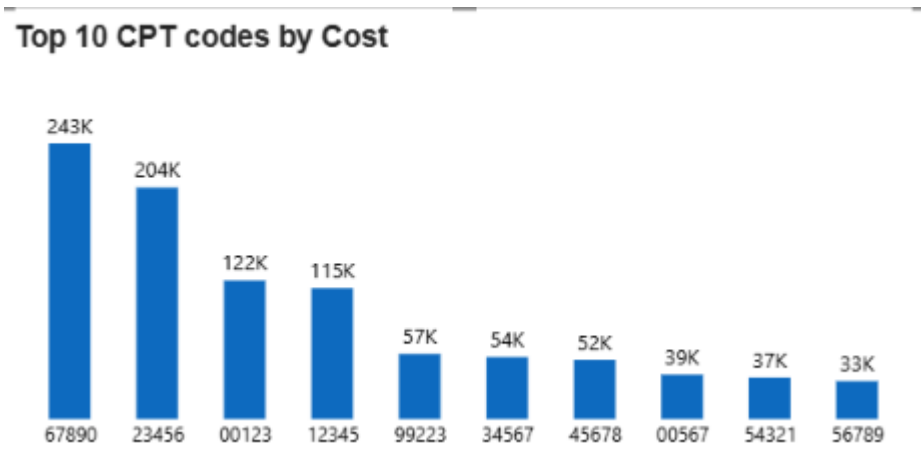

A.1:-

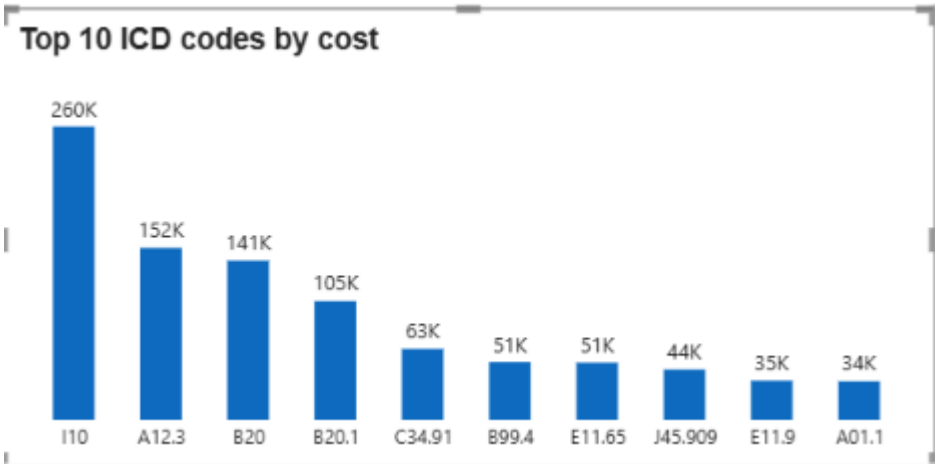

From the graph it show that **inpatient** claim type is the most expensive

Q.2:- Which CPT and ICD codes drive the highest spending?

A.2:-

From the graph displayed above we concluded that CPT code (67890) which means **Acute Inpatient Hospital Stay** is top 1 CPT by **$243k**, and for ICD code

I10 which represent **“Essential (primary) hypertension”** by total cost = **$260K**

Q.3:- Which members account for the largest share of total costs?

A.3:-by calculating the member share of cost = (member total cost/sum of members total cost)*100, I discovered that member with **member_id = 6** has the largest share of total cost by **2.79%**

Which translated to **$43300**

Q.4:- How do billed amounts compare to paid amounts?

A.4:-From the following table graph

claim_type	provider_id	cpt_code	paid_ratio
Pharmacy	PRV00214	54321	0%
Inpatient	PRV00001	10001	10%
Emergency	PRV04567	93000	30%
Inpatient	PRV00456	67890	35%
Inpatient	PRV08910	27650	40%
Emergency	PRV98765	00456	40%
Lab	PRV03422	80050	45%

I discovered that most of the medical claim types has **paid_ratio > 80%** which mean the insurance company pays more than 80% of the cost of the required medical service which resulted the loss the company suffer from
